# WHY 1<sup>st</sup> – Trends & Opportunities

**Eye-opening IT Application Insight** – EMBA classmates from business sector shared insightful IT application scenarios, e.g. fin-tech, students & schools matching

**Started FOOD-CO Project** – matching valuable food resources, service users and partners through IT solutions.

**i.e. IT as an ENABLER for service transformation**

- **Go online** (just-in-time service)
- **Connecting the dots** (collaboration & scalability)

**More Transformation** – Cyber Youth Service Team (CYST), GOODS-CO, “I am ...” Youth Portal etc.

# WHY 2<sup>nd</sup> – Learnings

**Critical IT System Challenges** – during strategic discussions, staff identified that our Finance and HR IT systems are significant hurdles (“fatal”) to organizational development.

- **Finance System:** series of unplanned enhancement
- **HR System:** vendor has not met performance expectations

**PAINFUL ENOUGH to make us move IMMEDIATELY ...**

**Lack of Funders Interest** – many funders are hesitant to invest in upgrading administrative IT systems for individual organizations.

# WHY 3<sup>rd</sup> – COVID-19 & Leadership

## **Urgent Digital Shift for Service Continuity –**

- **Necessity for Digital Transformation:** the pandemic and resulting restrictions compelled us to engage with service users digitally to maintain service delivery.
- **Transformation Insights:** the process, experiences and challenges encountered have prompted a reevaluation and proactive approach toward digital transformation.

**Tech Advocates in Board's Leadership** – both the Chairman and Vice Chairman of SJS are strongly believe in the transformative power of technology.

# HOW – Think through, Plan & Feasibility Study

**Connect the Dots, Avoid Silos** – projects are primarily led by designated project drivers. Need to assess integration and **leverage with internal resources and external parties**.

**Feasibility Studies** – to seek support from professional consultant, to conduct feasibility study that provides the agency head with a comprehensive overview of IT system development, offering fresh perspectives, i.e. **informed decision-making**.

# HOW – Think through, Plan & Feasibility Study

## Be Ready for the Collective Challenge –

- **Beyond Tasks about IT:** both IT system development and IT governance represent collective challenges that require adaptive leadership, i.e. management needs to mobilize different stakeholders to confront the “difficult reality”.
- **Adaptative Work to learn / do by different parties:** management should mobilize diverse parties to address the challenges and coordinate extensive adaptive efforts across stakeholders, e.g. raise or lower the heat; the IT collective challenge as the center, not IT Department as a technical fix.

# HOW – Think through, Plan & Feasibility Study

## Be Agile, Adjust the Plan –

There is NO all-in-one, definitive method for effectively integrating technology in service innovation and productivity or managing cybersecurity threats.

It might be beneficial to consider.....

- **Strategic Investment in IT:** investments in IT development must be carefully considered due to the rapid obsolescence of technologies, e.g. off-the-shelf / SaaS (Software as a Service) model.
- **Continuous Learning:** staff must constantly update their technology knowledge – improve digital literacy, not just skills.
